Introduction

A car has become part of the daily life of many people, the number of parking places in cities is growing, it is important for the user to understand where to find a parking lot even before he arrives to the destination point, what is the parking fee, is there an opportunity to book a parking lot - questions like these become more and more important for citizens. Answers to these questions save a lot of time on parking and provide more time for enjoying the life.

One of the possible solutions is Parking Cloud - Salesforce app that allows to manage the parking space easily.

About Parking Cloud

The speed of life creates a demand for solutions that help save time on routine operations. Integrated parking management within organization, city, logistics hub, or entertainment center has become part of the daily consumer need.

Parking Cloud is a cloud-based native Force.com application that ensures intelligent usage of parking lots. This solution for parking space management is integrated with real-time information from wireless parking sensors. The mobile version for drivers provides an opportunity to find a free parking lot in a minute. As the result, the number of traffic jams and air pollution reduces, people get more free time.
